reformation of econometrics is a sequel to the formation of econometrics a historical perspective 1993oup which traces the formation of econometric theory during the period 1930 1960 this book provides an account of the advances in the field of econometrics since the 1970s based on original research it focuses on the reformists movement and schools of thought and practices that attempted a paradigm shift in econometrics

in the 1970s and 1980s it describes the formation and consolidation of the cowles commission cc paradigm and traces and analyses the three major methodological attempts to resolve problems involved in model choice and specification of the cc paradigm these attempts have reoriented the focus of econometric research from internal questions how to optimally estimate a priori given structural parameters to external questions how to choose design and specify models it also examines various modelling issues and problems through two case studies modelling the phillips curve and business cycles the third part of the book delves into the development of three key aspects of model specification in detail structural parameters error terms and model selection and design procedures the final chapter uses citation analyses to study the impact of the cc paradigm over the span of three and half decades 1970 2005 the citation statistics show that the impact has remained extensive and relatively strong in spite of certain weakening signs it implies that the reformative attempts have fallen short of causing a paradigm shift
